

Obin (Le Nghia) Nguyen

Senior Strategic Consultant

nguyenler@gmail.com · +44(0)7845 450678 · [LinkedIn](#) · London, UK

Seven years turning complex datasets into product decisions. I have designed experiments, built analytical frameworks and worked alongside product managers to shape what gets built and why across mobile network data, geospatial analytics and infrastructure intelligence. I am comfortable in SQL and Python, know how to set up a feedback loop that changes prioritisation, and care about translating analysis into something a product or commercial team can act on rather than just read.

EXPERIENCE

Senior Strategic Consultant & Depute Head of Data Platforms

Amey · London, UK

Aug 2023 – Sep 2025

- Partnered with product and engineering leads to shape the roadmap for an MND-based analytics platform — running discovery with data scientists and analysts, translating what I found into prioritised workstreams, and tracking whether changes moved the metrics that mattered.
- Designed and interpreted analytical experiments on movement data outputs: set up control and test conditions, defined success criteria upfront, and used results to make build vs. buy calls on two geospatial tooling decisions, both shipped within the same quarter.
- Rebuilt core ETL jobs in Python and SQL with a focus on data quality and reproducibility. Pipeline run time fell 60% and AWS spend dropped around £5k/month, with output reliability improving measurably across downstream analytics.
- Set up a structured feedback loop where flagged outputs from analysts and data scientists fed directly into the algorithm and QA backlog; closing the gap between what the platform produced and what users trusted.
- Led a commercial MND study for a transport operator, framing the analytical questions, designing the methodology and communicating findings clearly enough that they fed directly into service planning decisions.

Senior Data Analyst

Jacobs · London, UK

Jun 2021 – Sep 2023

- Won a Jacobs Award of Excellence in 2023 for an IoT sensor analytics platform that detected asset deterioration early, removing all non-statutory planned maintenance. Built on Azure Data Factory, with ML-based fault prediction and Power BI reporting for operational teams.
- Defined success metrics for a real-time sensor data pipeline from scratch: data quality thresholds, alert logic, and how the engineering team would know whether the model was performing. Iterated based on feedback from the people using it day-to-day.
- Built lifecycle cost and carbon models for a major infrastructure programme, making trade-offs between budget paths and asset condition visible to senior decision-makers who needed to act on the analysis, not just receive it.
- Designed a risk-scoring framework for a water utility using SQL and Python, and a defect-resolution dashboard for a rail programme both adopted by operational teams and used to drive prioritisation decisions.

Senior Data Analyst

Movement Strategies · London, UK

Apr 2019 – Jun 2021

- Key contributor on an origin-destination rail product built on mobile network data, cross-referenced with routing data and validated against national figures. The product sold for £1.5M to a major public transport authority.
- Ran a structured feedback loop with the analysts and data scientists using our products: tracked where outputs were questioned or worked around, used that to reprioritise the algorithm roadmap, and measured improvement against agreed accuracy benchmarks.
- Productised road, rail and travel insight offers on AWS using SQL, Python and PostGIS writing the QA logic, ETL specs and output templates that made each product repeatable and defensible across client contexts.

Analyst

Freshminds Talent · London, UK

Feb 2018 – Apr 2019

- Quantitative and qualitative research across strategy, market sizing and customer analysis projects for major consulting firms, translating large datasets into clear written recommendations for senior audiences.

EDUCATION

MSc Smart Cities and Urban Analytics

UCL · 2017–2018

BSc Psychology and Business

Aston University · 2012–2016

Exchange: Hong Kong Polytechnic University · 2014–2015

Certifications

IBM Product Manager Professional Certificate, Coursera (2026)
AgilePM Practitioner, APMG (Feb 2025) · Become a Product Manager, Udemy (Jan 2026)
Intro to ESG, CFI (2025) · CSRD Fundamentals (2025) · LCA, UCL (2025)

SKILLS

Analysis and modelling Python · SQL · R · PostGIS · Pandas · NumPy
Cloud and platform AWS · Azure · Azure Data Factory · Git · JIRA · Confluence
Analytics and viz Power BI · Tableau · QGIS · Excel
Product delivery Agile · Roadmapping · Backlog management · OKRs · Discovery
Languages English (full professional) · Czech (native) · Vietnamese (working)
